

PLATE III

Epidermophyton floccosum (strain "B"). Cultures two
and three weeks old on Sabouraud's maltose agar.

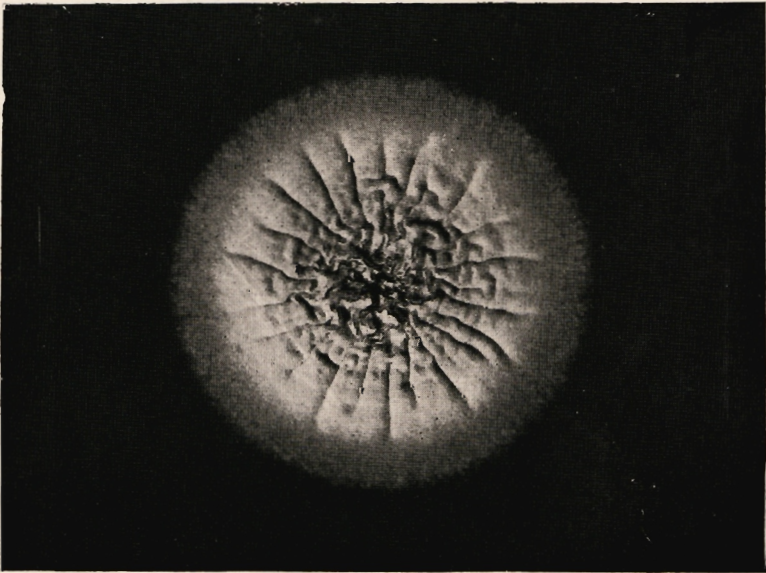

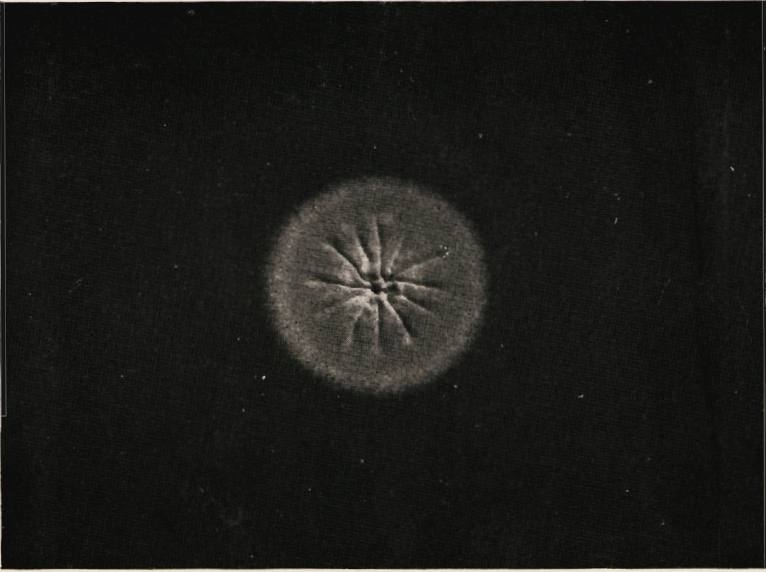

PLATE IV

Hanging-drop culture five days old (strain "A") in corn meal infusion (low power magnification).

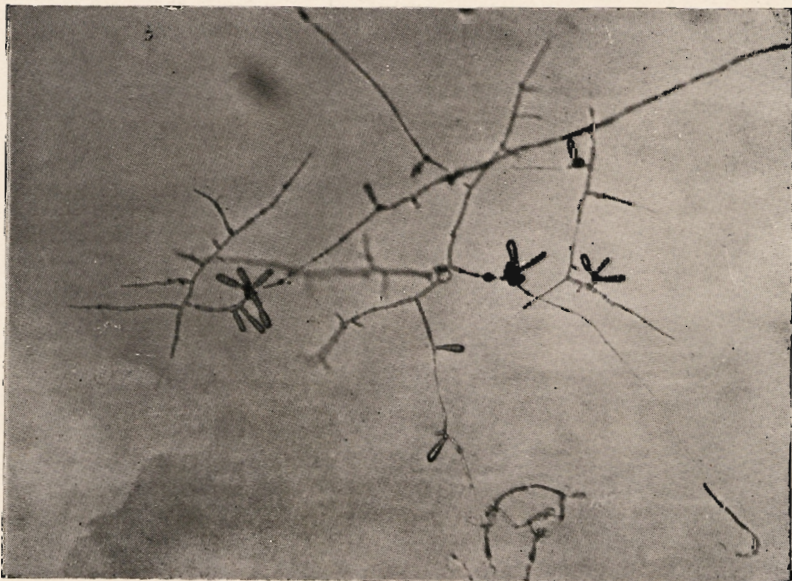

PLATE V

Hanging-drop culture five days old (strain "A") in corn meal infusion (high power magnification).

PLATE VI

Camera lucida drawings from a hanging-drop culture forty-eight hours old (strain "A") in glucose broth (high power magnification). Note macroconidia showing polar and central germination.
